

User Guide

SLIDE SHEETS

The slide sheets are made in colours to indicate their size and have a contrasting loop for hanging

The sheets are in the form of a tube with very low friction inner surfaces.

They are used for various positioning jobs like moving the patient up or down the bed or simply turning. Along with many others.

The two inner surfaces slide easily against one another avoiding any sheer force to the patient

Instructions for use

First lay the sheet close to the heaviest parts of the body, hips/shoulders, then roll him/her onto the sheet.

Now pull on the upper layer in the direction required.

The sheet can be removed by gently easing out the bottom layer of the sheet.

Care instructions

If the slide sheet needs washing please see below.

40° wash

Low
tumble dry

Do not dry
clean

Do not iron

Do not bleach
